#### As an IT Consultant or Reseller, are you faced with:

- How to fulfill your customers evolving user access needs while managing IT complexity and cost with better efficiency, faster responsiveness, and additional business value or competitive edge?
- Determining which desktop virtualization solution best suits your customer needs with the least cost and complexity for maintenance?

Desktop virtualization is radically changing the computing landscape, giving IT the benefits of security, simplicity and cost savings of centralized management, while delivering a greatly enhanced user experience for all type of customer scenarios.

The truth is, to efficiently and cost effectively provide seamless client side virtualization capabilities is no easy task, and without the right solution set, can become a landmine, full of risks and multiple points of failure. With so many vendors pushing such a vast array of competing and overlapping virtualization technologies, determining which solution set can best accommodate your requirements is no simple matter.

Deploying Konec Elite™ in combination with Microsoft's virtualization technologies will help to radically simplify the set-up, management, delivery and dynamic provisioning of virtual client environments while extending desktop, application and hardware lifecycles. This means real dollar savings for your customers and reduced IT headaches for you.

#### Key Business Benefits to Konec Elite™ Desktop Virtualization Solutions

- **Dynamic Application & Desktop Delivery** – Konec Elite dramatically simplifies the world of desktop computing by delivering applications and desktops, or a combination thereof, as an on-demand service to any device, anywhere, anytime enhancing the quality of services through real-time information flow, regardless of location. This is accomplished using desktopsites' proprietary FlexSpin™ technology.
- **FlexSpin™ Delivery** – Users may require different types of applications or desktops based on their roles in a business. With Konec Elite's FlexSpin delivery technology, administrators can dynamically assemble and deliver any type of application or virtual desktop to any user, on any device increasing business agility and radically simplifying desktop management.
- **Single Centralized Management Console** - Konec Elite provides a unified, centralized management interface to manage and deploy applications and desktops (whether TS, RDS, or VDI) to users, whether local or remote, dramatically simplifying the time, cost, and effort required to manage these resources.
- **Native Integration with Microsoft Windows Server 2008 Hyper-V & System Center Virtual Machine Manager ('SCVMM')** - Konec Elite consolidates physical and virtual resources from Hyper-V and SCVMM into a single centralized management console. From these consolidated resources, Konec Elite's FlexSpin delivery technology then enables the rapid provisioning and dynamic deployment of applications and virtual desktops to users anywhere, anytime, on any device.
- **Optimize the End User Experience Anywhere, Anytime, on Any Device** – Using Konec Elite, users have on-demand access to the applications and information they need when they need it, delivered in a consistent user experience users have come to expect, especially as they roam between devices. .
- **Comprehensive Security Access & Data Protection** – Designed to work with multiple Windows client platforms, Konec Elite's built-in policy management provides the control that IT administrators need to ensure that technologies are not abused by users, but rather, to allow the appropriate level of access to the right information and business resources that users require.
- **Scalable**– Microsoft centric, Konec Elite plugs seamlessly into your customer's existing Microsoft IT environment, ensuring a quick and complete solution set that supports the demand for your customer's immediate business needs and their plans for future growth using Microsoft Hyper-V and System Center Products.
- **Affordable** – Konec Elite delivers core capabilities for all user scenarios at a fraction of the cost of comparable enterprise desktop virtualization solution offerings.
